SUMMARY

Senior Software Engineer with 5+ years building backend-heavy full-stack systems on Node.js/TypeScript, Python, PostgreSQL, Redis, and AWS. Build, ship, and operate production AI platforms independently (Anthropic, OpenAI, Gemini) on self-hosted infrastructure, and publish native iOS and Android apps end-to-end — from API and data model to App Store release — under my product studio Omnia Potentia. Led a cross-region production migration with 99.8% data integrity. Currently extending MCP servers in Python to power LLM-based document generation pipelines at Accenture. Open to senior engineering roles across Europe.

EXPERIENCE

Accenture • Remote
Senior Software Engineer • Full-time 03/2025 – Present

- Delivered across three Accenture client engagements: an AI-driven document generation platform for a global pharmaceutical client, an AWS-heavy full-stack data platform, and an enterprise frontend component library for a healthcare B2B client.
- **AI Document Generation Platform (current):** Extending an existing MCP server in Python for a global pharmaceutical client, implementing new rules and capabilities whenever document requirements aren't yet supported; these power LLM pipelines that turn client guidelines and annotations into structured prompts, generate documents from templates and supporting reference files, and validate the output against source requirements, working with Claude Skills and MCP-based agents.
- **Enterprise Component Library:** Architected the performance testing strategy for a healthcare client's enterprise component library, writing user-flow-based performance tests for 45+ components with Lighthouse, Vitest, and Playwright; contributed 7 production components following established design system patterns.
- **AWS Data Platform:** Built the backend of a full-stack data platform on Node.js and AWS, designing serverless REST APIs with Lambda and API Gateway, an event-driven messaging layer with SNS and SQS, and Spark-based ETL pipelines with AWS Glue feeding Athena for SQL querying over managed data tables; managed IAM-based access control, used CloudWatch for monitoring and incident investigation, deployed Grafana dashboards on the team's monitoring stack, and delivered an Angular frontend to surface the data.
- Conduct code reviews and mentor team members on backend architecture, cloud services, and testing methodology.

Karnaval Media Group • Istanbul, Turkey
Software Engineer • Full-time 03/2024 – 01/2025

- **Cut page load times by 40%** by refactoring critical rendering paths and optimizing bundle size in React and Next.js applications, directly improving content engagement metrics across the platform.
- **Built a reusable component library** to standardize UI patterns and establish modern frontend development standards for future projects.

Orion Innovation • Istanbul, Turkey
Software Engineer & DevOps Engineer • Full-time 12/2021 – 03/2024

- **Led cross-region production migration** of 6 servers from Russia to Turkey, achieving 99.8% data integrity and cutting planned downtime by 40% through phased rollout and validation.
- **Built production monitoring, alerting, and CI/CD pipelines** using Prometheus and Grafana — defining alert thresholds, on-call procedures, and integrated quality checks; investigated and resolved triggered incidents to maintain platform reliability.
- **Served as Scrum Master for a 5-6 person team** and mentored 2 interns end-to-end on an internal tool project, facilitating sprint ceremonies and providing structured guidance on code quality and full development lifecycle.
- **Refactored core application logic and optimized database queries**, improving response time by 32% and reducing server resource consumption by 25%, lowering infrastructure costs.

Casemice Digital • Istanbul, Turkey
Software Engineer • Full-time 01/2021 – 12/2021

- **Built a real-time 3D virtual environment** for medical professionals to attend conferences and collaboratively discuss presentations on a shared large-screen display, using React, Three.js, and WebSocket-based Node.js backend.

PROJECTS

Independent products I design, build, and operate end-to-end. Onelior, Cevixa, Dawnia, and TravelersBase ship under my product studio **Omnia Potentia** (omniapotentia.com).

Moxakk Analyzer — *Multi-Sport AI Insights Platform* (moxakk.com)

- Built and operate a production AI platform that aggregates live sports data (fixtures, lineups, standings, H2H, weather) from multiple sources and produces structured match insights — scenario narratives and 16 derived signals including streaks, fixture congestion, derbies, race context, and microsignals; football is live in production, with basketball and volleyball currently in active development.
- Designed a 3-provider AI ensemble (Anthropic Claude, OpenAI, Google Gemini) with weighted consensus and confidence calibration to reduce single-provider variance; built an admin dashboard tracking per-provider and per-league accuracy over time.
- Engineered the backend for production reliability with BullMQ workers, a Redis-locked cron scheduler, a 2-layer cache with single-flight deduplication and per-resource TTL, and a custom rate limiter (per-host interval, 429 cool-down, daily cap) on Node.js/TypeScript, Express, Prisma, PostgreSQL, and Redis; built a Next.js 16 + React 19 frontend with a custom design system.

Onelior — *Gamified Fitness & Wellbeing App* (onelior.com) • iOS • Live on the App Store

- Built a native SwiftUI iOS app and NestJS backend that turn Apple Health workouts, sleep, and study sessions into altitude on a virtual climb of the Seven Summits; progression is fully server-authoritative through a single rewards ledger guarded by per-user locks, with minute-level de-duplication so overlapping activities never count twice.
- Hardened authentication and abuse resistance: Sign in with Apple/Google via a one-time, provider-bound nonce flow, rotating refresh-token families, Apple App Attest device attestation, Redis-backed distributed throttling, and HealthKit background delivery that syncs securely while the device is locked.
- Runs on NestJS, PostgreSQL 16, Prisma, Redis, and BullMQ with 60+ test suites, OpenAPI docs, and hardened multi-stage Docker images (non-root runtime, separate ephemeral migration image); shipped a Next.js marketing site with a strict, zero-external-request CSP.

Cevixa — *Personal & Shared Expense Tracker* (appcevixa.com) • iOS & Android • App Store

- Built a native expense tracker across three codebases — FastAPI/SQLAlchemy/PostgreSQL backend, SwiftUI iOS, and Kotlin/Jetpack Compose Android — sharing one OpenAPI contract and test-fixture set; supports shared spaces, recurring bills, monthly budgets, and four currencies (TRY/EUR/USD/GBP) with dated ECB rates and decimal-safe money handling.
- Designed a retry-safe CSV bank import with column/date/number mapping, duplicate review, and partial-failure recovery, plus versioned edits, a 30-day trash, JSON export, durable account deletion, and an offline demo mode; security CI scans dependencies and full Git history.

Dawnia — *Medication, Habit & Task Tracker* (appdawnia.com) • iOS • App Store

- Built an offline-first, privacy-first iOS app (no account, no server) with SwiftUI, SwiftData, WidgetKit, Live Activities, and Siri App Intents; a portable pure-Swift domain package handles DST-safe scheduling, versioned schedule rules, dose adherence and inventory, a diff-based notification planner, and doctor-ready PDF reports, localized in Turkish and English.

TravelersBase — *Social Community Platform for Travelers* • Web & iOS • Work in progress

- Building a social platform for travelers that blends Reddit-style threads and discussions, X-style posts, and Instagram/Facebook-style sharing and profiles into one home base for people on the road, with AI-powered trip planning (preferences → editable, map-based itineraries with route optimization and budget estimates) as one of its built-in features.

SKILLS

Backend: Node.js, TypeScript, Python, Express, NestJS, FastAPI • PostgreSQL, Redis, MongoDB, MySQL • Prisma, SQLAlchemy, BullMQ, Zod, JWT/OAuth auth, REST API & system design • Additional: PHP

Frontend: React, Next.js (App Router), Angular, Tailwind • Performance testing (Lighthouse, Vitest, Playwright)

Mobile: Swift, SwiftUI, SwiftData, HealthKit, WidgetKit, App Intents, App Attest • Kotlin, Jetpack Compose • App Store release

Cloud & DevOps: AWS (EC2, Lambda, API Gateway, S3, RDS, ElastiCache, Cognito, SNS, SQS, Glue, Athena, CloudWatch, IAM) • Linux, Docker, Nginx, Hetzner VPS • GitHub Actions, CI/CD, Prometheus, Grafana

AI: Anthropic, OpenAI, Gemini APIs • MCP (servers & agents), Claude Skills • n8n

EDUCATION

B.Sc. Computer Engineering — Sakarya University • 09/2017 – 07/2021

LANGUAGES

Turkish (Native) • English (Professional Working Proficiency)
